A census-taker would like to determine the ages of my children. Read the dialogue below and answer the question.

Census-taker: “Mr. K., how old are your children?”

Mr. K.: “I have no one year olds. The product of the ages of my children is 90 and the sum of the ages is the same as my house number.”

Census-taker: “I can see the house number, but you have not given me enough information. What else do I need to know to determine the ages of your children?”

Mr. K.: “You must also know that the boy across the street is older than my oldest child.”

Census-taker: “Thank you. Have a great day.”

Question: How old is the boy across the street?
